#### Question

What can be said about the model theory of groups acting nontrivially on simplicial trees? Is it possible for such groups to be  $\omega$ -stable or superstable?

◆□ → ◆□ → ◆□ → ◆□ → □ □ □

# Bass-Serre theorem

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三 のへで

# Theorem 2 (Bass-Serre)

◆□▶ ◆舂▶ ◆注≯ ◆注≯ □注□

## Theorem 2 (Bass-Serre)

A group acts without inversions and nontrivially on a simplicial tree if and only if either G splits as a free product with amalgamation or G has an infinite cyclic quotient.

<ロト <四ト <注入 <注下 <注下 <

# Free products

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

## What about the superstability of free products?

## What about the superstability of free products?

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > □ Ξ

Theorem 3 (Poizat, 1983)

## What about the superstability of free products?

## Theorem 3 (Poizat, 1983)

A nontrivial free product  $G_1 * G_2$  is superstable if and only if  $G_1 = G_2 = \mathbb{Z}_2$ .

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > □ Ξ

# $\omega$ -stable groups

(中) (문) (문) (문) (문)

An action of an  $\omega$ -stable group on a simplical tree is trivial.

An action of an  $\omega$ -stable group on a simplical tree is trivial.

Using Bass-Serre theorem:

An action of an  $\omega$ -stable group on a simplical tree is trivial.

Using Bass-Serre theorem:

## Corollary 1

A free product with amalgamtion or an HNN-extension is not  $\omega$ -stable.

# Minimal Superstable groups

## Theorem 6

Let G be a superstable group of finite Lascar rank acting nontrivially on a  $\Lambda$ -tree where  $\Lambda = \mathbb{Z}$  or  $\Lambda = \mathbb{R}$ .

Let G be a superstable group of finite Lascar rank acting nontrivially on a  $\Lambda$ -tree where  $\Lambda = \mathbb{Z}$  or  $\Lambda = \mathbb{R}$ . Suppose that, if H is a definable subgroup such that U(H) < U(G), and having a nontrivial action on a  $\Lambda$ -tree, then H is nilpotent-by-finite.

Let G be a superstable group of finite Lascar rank acting nontrivially on a  $\Lambda$ -tree where  $\Lambda = \mathbb{Z}$  or  $\Lambda = \mathbb{R}$ . Suppose that, if H is a definable subgroup such that U(H) < U(G), and having a nontrivial action on a  $\Lambda$ -tree, then H is nilpotent-by-finite. Then there are definable subgroups  $H_1 \lhd H_2 \lhd G$  such that  $H_2$  is of finite index in G, and one of the following cases holds:

Let G be a superstable group of finite Lascar rank acting nontrivially on a  $\Lambda$ -tree where  $\Lambda = \mathbb{Z}$  or  $\Lambda = \mathbb{R}$ . Suppose that, if H is a definable subgroup such that U(H) < U(G), and having a nontrivial action on a  $\Lambda$ -tree, then H is nilpotent-by-finite. Then there are definable subgroups  $H_1 \lhd H_2 \lhd G$  such that  $H_2$  is of finite index in G, and one of the following cases holds:

(1)  $H_1$  is connected, any action of  $H_1$  on a  $\Lambda$ -tree is trivial,  $H_2/H_1$  is soluble and has a nontrivial action on a  $\Lambda$ -tree.

Let G be a superstable group of finite Lascar rank acting nontrivially on a  $\Lambda$ -tree where  $\Lambda = \mathbb{Z}$  or  $\Lambda = \mathbb{R}$ . Suppose that, if H is a definable subgroup such that U(H) < U(G), and having a nontrivial action on a  $\Lambda$ -tree, then H is nilpotent-by-finite. Then there are definable subgroups  $H_1 \lhd H_2 \lhd G$  such that  $H_2$  is of finite index in G, and one of the following cases holds:

(1)  $H_1$  is connected, any action of  $H_1$  on a  $\Lambda$ -tree is trivial,  $H_2/H_1$  is soluble and has a nontrivial action on a  $\Lambda$ -tree. (2)  $H_2/H_1$  is simple and acts nontrivially on a  $\Lambda$ -tree,

Let G be a superstable group of finite Lascar rank acting nontrivially on a  $\Lambda$ -tree where  $\Lambda = \mathbb{Z}$  or  $\Lambda = \mathbb{R}$ . Suppose that, if H is a definable subgroup such that U(H) < U(G), and having a nontrivial action on a  $\Lambda$ -tree, then H is nilpotent-by-finite. Then there are definable subgroups  $H_1 \lhd H_2 \lhd G$  such that  $H_2$  is of finite index in G, and one of the following cases holds:

(1)  $H_1$  is connected, any action of  $H_1$  on a  $\Lambda$ -tree is trivial,  $H_2/H_1$  is soluble and has a nontrivial action on a  $\Lambda$ -tree.

(2)  $H_2/H_1$  is simple and acts nontrivially on a  $\Lambda$ -tree,  $H_2/H_1$  has a Borel family of equationally-definable nilpotent subgoups such that there exists  $m \in \mathbb{N}$  such that for every hyperbolic element g in  $H_2/H_1$ , there is  $1 \le n \le m$ , such that  $g^n$  is in some  $B \in \mathcal{B}$ .

Let G be a superstable group of finite Lascar rank acting nontrivially on a  $\Lambda$ -tree where  $\Lambda = \mathbb{Z}$  or  $\Lambda = \mathbb{R}$ . Suppose that, if H is a definable subgroup such that U(H) < U(G), and having a nontrivial action on a  $\Lambda$ -tree, then H is nilpotent-by-finite. Then there are definable subgroups  $H_1 \lhd H_2 \lhd G$  such that  $H_2$  is of finite index in G, and one of the following cases holds:

(1)  $H_1$  is connected, any action of  $H_1$  on a  $\Lambda$ -tree is trivial,  $H_2/H_1$  is soluble and has a nontrivial action on a  $\Lambda$ -tree.

(2)  $H_2/H_1$  is simple and acts nontrivially on a  $\Lambda$ -tree,  $H_2/H_1$  has a Borel family of equationally-definable nilpotent subgoups such that there exists  $m \in \mathbb{N}$  such that for every hyperbolic element g in  $H_2/H_1$ , there is  $1 \le n \le m$ , such that  $g^n$  is in some  $B \in \mathcal{B}$ . If  $\Lambda = \mathbb{Z}$  then  $H_2/H_1 = G_1 *_A G_2$  with the biindex of A is 2 in both  $G_1$  and  $G_2$ .
